About me

Full-stack engineer with a backend focus, passionate about building real products that integrate AI meaningfully. I've led and shipped backend-heavy systems, contributed to frontend experiences when needed, and worked closely with AI teams to turn models into valuable, working applications. Eager to contribute innovative solutions in the ever-evolving technology landscape, I thrive where engineering meets intelligence.

Experience

Software Engineer, (Intelika ai)

NOVEMBER 2024 — PRESENT

- Integrated LLMs from OpenAI, Anthropic, Gemini, Groq, LLaMA, and Hugging Face into scalable systems.
- Built RAG pipelines using Redis, pgvector, Cloudflare Vector; utilized embedding models like BGE-M3
- Developed microservices with NestJS, Prisma, and gRPC; automated workflows with n8n.
- Applied LangChain and LangGraph for agentic and composable AI applications.
- Handled memory, context, and vector search tailored to each model's features.

Back DEV (License Market)

APRIL 2024 — OCTOBER 2024

- Designed and implemented backend architecture using **NestJS** for scalable development.
- Utilized **PostgreSQL** for efficient database management and **RabbitMQ** for robust messaging in a microservices architecture.
- Integrated **WebSocket** for real-time communication features.
- Orchestrated deployments with **Docker** and **Kubernetes**, ensuring high availability and scalability.
- Developed a distributed system using microservices principles to handle complex workflows.

PortfolioPal

- Frontend: TypeScript, Next.js (React).
- Authentication: NextAuth, JWT for security.
- Design: Tailwind CSS for a modern look.
- API: Seamless integration with GraphQL.
- Data Storage: Cloudinary for efficient storage, optimal performance, scalability.

Back DEV (Teta power company)

SEPTEMBER 2023 — DECEMBER 2023

- User Management:Robust backend for secure user management and role-based access.
- Data Storage:MongoDB for general data.
  InfluxDB for real-time monitoring.
- Logger System (C#):C# logger for efficient system activity tracking.
- Real-Time Handling:MQTT for stream data from units and IoT devices.
  WebSocket for real-time monitoring.
- Scalability:PM2 for process management.
  Nginx for load balancing.
- IoT Integration:MQTT for seamless IoT device integration.
  InfluxDB for monitoring and analyzing IoT-generated data.

Back DEV (ATS company)

MARCH 2024 — MAY 2024

- Developed microservices architecture utilizing Node.js, TypeScript, and NestJS framework.
- Implemented data persistence with Prisma for PostgreSQL and Mongoose for MongoDB.
- Orchestrated microservices communication via TCP and GraphQL gateway.
- Built various services including numbers, ticket, task, upload, and JWT service for authentication and authorization across all services.
- Integrated WebSocket for real-time chat and notifications.
- Implemented caching using Redis to optimize performance.

FoodPulse Backend System

- Node.js/Express: High-performance server for responsive user experience.
- TypeScript/MongoDB: Secure database interactions with static typing.
- Docker/Kubernetes: Streamlined deployment for scalable food order handling.
- Location Services: Firebase integration for accurate order handling and delivery.
- Secure OTP: Twilio implementation for enhanced user authentication.
- Cross-Platform Notifications: Twilio for real-time order status updates on iOS and Android.
- Communication: Gmail for comprehensive communication in the food delivery ecosystem.

Rentify

- Frontend: TypeScript, Next.js for a smooth user experience.
- Authentication: Secured with NextAuth for top-notch user safety and privacy.
- Data Management: MongoDB and Prisma for robust and efficient data handling.
- Media Storage: Cloudinary ensures optimal presentation for property images.
- Design: Sleek and responsive with Tailwind CSS.
- Style and Functionality: Enhanced with React icons for both style and functionality.
