SUMMARY

I am a **Software Engineer**, **Solutions Architect**, and **Technology Leader** with expertise in **AI**, **Data Analysis**, **Full-Stack Web Development**, **Blockchain**, **Automation**, and **Telecom Systems**. **Since 2018**, I have been designing and developing scalable, intelligent platforms that **optimize operations**, **enhance automation**, and drive innovation across multiple industries.

I have **led** and **built** enterprise **AI solutions**, **large-scale SaaS platforms**, **blockchain automation systems**, and **high-frequency trading technologies**, helping businesses streamline processes, make **data-driven** decisions, and scale efficiently. My experience includes **developing AI-driven analytics**, **full-stack infrastructures, financial trading algorithms**, and **telecom management systems**, where I integrate **data intelligence**, **automation**, and **high-performance engineering** to solve complex challenges.

Beyond development, I focus on **strategic innovation** and **leadership**, ensuring that **technology** is leveraged to enhance business efficiency, reduce operational overhead, and create scalable digital solutions. Whether it's architecting **AI-powered systems**, **optimizing blockchain applications**, or **leading full-stack development teams**, I thrive at the intersection of technology, automation, and business growth.

KEY ACHIEVEMENTS

Developed Intelligent OSS for MTN Irancell

Developed an Intelligent OSS for **FTTX OLTs**, enabling real-time data retrieval, automated network monitoring, and **intelligent engineering** workflows, reducing manual interventions by **40%** and optimizing **fiber optic** operations.

Transformed Fiber Network Planning with AI

Developed the **FTTX Dashboard**, which fully automated **fiber optic network design**, reducing planning time by **80%** and eliminating manual inefficiencies. By integrating **AI-powered route optimization** and infrastructure placement, the system ensured optimal cable layouts and strategic equipment positioning across entire cities. Additionally, it enhanced **network reliability**, enabling **real-time failure detection**, **downtime tracking**, and **maintenance** automation, reducing outage response times by **40%**.

Developed Industry-First Next.js Website Builder

Developed a **Next.js-powered website builder**, enabling businesses to create fully functional **reservation-based** websites **under a second**, reducing development time from **weeks to minutes also enabling 20x websites to operate using the resources of a single Next.js instance through advanced SSR techniques.**

Developed AI-Driven KPI Degradation Analysis

Built an **AI-powered KPI degradation analysis system** for **MTN Irancell**, achieving up to **90%** improvement in KPI degradation **detection** and **troubleshooting** efficiency. By integrating Big Data analytics, and Machine Learning, the system automatically detected network performance issues, root causes. This significantly enhanced network reliability and eliminated delays in identifying degradations before they impacted service quality.

CORE TECHNOLOGIES

AI, Data Science & Big Data

Tools: TensorFlow, PyTorch, Pandas, Polars, OpenCV
Big Data & Processing: Spark, Hadoop, Hive, Sqoop Ozone
Databases: PostgreSQL, MySQL, MongoDB, SQL Server
AI & ML Applications: FastAPI, Flask, Django

Full-Stack Web Development & SaaS

Frontend: React, Next.js, Vue.js, Nuxt.js, TailwindCSS, GSAP, Framer Motion, Vite, three.js, shadcn
Backend: Node.js, Spring Boot, Laravel, Django, Flask, FastAPI, ASP.NET, Elasticsearch

Security, Automation & Devops

CI/CD & Infrastructure: Docker, Nginx, Git, GitHub
Security & Networking: API Security, SQL Security, OAuth, JWT, Firewalls, Reverse Proxy Management
Automation Tools: Selenium, Telegram Bots, Cron Jobs, Web Scraping Automation
Cloud & Hosting: Firebase, cloudinary, aws

Blockchain & Crypto Development

Smart Contracts & dApps: Solidity, Web3.js, ethers.js
Automated Trading: MQL4/MQL5, Trading Bots

Creative & Design Tools

UI/UX & Visual Content: Adobe After Effects, Photoshop, Premiere Pro, Canva

General Programming & Scripting Languages

Java, C#, Python, JavaScript, TypeScript, PHP, SQL, Rust, C++, Kotlin, Bash, Swift, Solidity, HiveQL, Batch, MQL 5 & 4

Game Development & Multiplayer Systems

Game Engines: Unity, Unreal Engine, LOVE2D
Scripting & Modding: Lua, Pawn
Server-Side Development: Node.js, Python, C++, Rust

PROFESSIONAL FULL-TIME EXPERIENCES

MTN Irancell - Operations solution architecture & Data Analysis

📅 Aug 2023 – **Present** | Telecom & Software Engineering

At MTN Irancell, I have led the development of AI-powered network optimization systems, automated telecom data analysis workflows, and intelligent operational support solutions that have significantly improved network reliability, efficiency, and automation. My work has directly contributed to reducing downtime, enhancing network visibility, and optimizing engineering processes at scale.

🔹 **Key Contributions & Achievements:**

Developed an AI-Driven KPI Degradation Analysis System

- Designed an **AI-powered Big Data analysis** platform to identify **KPI degradations and root causes** across multiple telecom sections
- Leveraged **Machine Learning** and historical data to detect network issues before they impact service quality
- Achieved a **90%** reduction in troubleshooting time, allowing engineers to focus on proactive network optimizations

Designed & Built the AI-Powered FTTX Dashboard

- Created an intelligent fiber network **web application** that **automates cable route optimization**, **infrastructure placemen**t, and **maintenance tracking**
- Eliminated manual fiber optic **network planning**, reducing design time by **80%**
- Integrated **real-time network monitoring**, outage detection, and **traffic engineering tools**, enhancing network deployment and performance

Developed an Intelligent OSS System for Fiber Optic OLTs

- Built a **real-time web application** that retrieves, processes, and analyzes **high-volume telecom data** from OLTs
- Provided engineers with a comprehensive dashboard for **network visualization**, **automated reporting**, and **Tools for OLT Management & Monitoring.**

Engineered OMA – AI Assistant for Telecom Operations

- Developed a **highly intelligent telecom AI assistant** capable of **understanding**, **analyzing,** and **executing complex network operations** with **engineer-level precision**
- Integrated **real-time network insights**, **automated troubleshooting,** and **smart routing decisions**, reducing manual interventions and accelerating response times
- Designed an adaptive learning system, allowing the AI to continuously refine its knowledge from network patterns, user interactions, and historical data
- Equipped **OMA** with **personalized** reporting capabilities, generating customized reports tailored to different user roles and operational needs

AEC – Software Engineer

📅 March 2023 – August 2023 | Software Engineering

Developed a high-performance web and mobile solution to optimize reporting, monitoring, and data management workflows for AEC. Focused on seamless report generation, real-time engineer tracking, and secure data handlingto enhance operational efficiency.

Huawei – Software Engineering Intern

📅 January 2023 – March 2023 | Telecom & Software Engineering

Developed a secure web application for monitoring on-site engineers and task analysis. Built data analysis tools to enhance inventory tracking and resource allocation and detect unusual changes in network.

MadGames – Game Developer & Server Engineer

📅 February 2019 – January 2023 | Game Development, Automation & Server Management

Developed and managed custom multiplayer game servers, integrating advanced automation, security, and real-time data management to enhance gameplay and administrative control. Built automated server deployment systems, rank shops, and web-based management tools, streamlining operations for both players and administrators.

🔹 **Key Contributions & Achievements:**

- Developed and optimized multiplayer game servers for Minecraft, Rust, and CS:GO, CS 1.6 implementing **custom mods**, **plugins**, and **automation tools.**
- Built a **real-time web dashboard** for these Games displaying playtime, leaderboards, and custom statistics for better player engagement.
- Created an **online rank shop** for Minecraft, enabling **real-time purchases** of perks, items, and ranks through a seamless digital storefront.
- Designed a **custom admin panel** for Rust, allowing efficient in-game and remote server management, improving administrative efficiency.
- Integrated **Discord Web hooks** for automated notifications, server updates, and player event tracking to enhance community engagement.
- Configured and optimized TeamSpeak servers, implementing role-based access, voice communication security, and admin control settings.
- **Automated game server & TeamSpeak sales, allowing customers to purchase,** configure, **and deploy game servers instantly with minimal manual intervention.**
- Implemented advanced security measures, including **firewall configurations**, **ProxyFire integration**, VPS security hardening, securing servers against DDoS attacks, unauthorized access, and game exploits.

FREELANCE & PART-TIME EXPERIENCE

IPEC Yadgar Iliad Company - Senior Developer & Technical Lead

📅 November 2024 – **Present | Management** & **refineries**
Leading +10 developers across multiple large-scale software projects, overseeing technical direction, architecture, and security. Managing the integration of microservices , directly impacting automation, reporting, and data management across multiple petrochemical refineries.

🔹 **Key Leadership & Impact:**

- **Head of software development**, managing team structure, **development roadmaps**, and **code reviews.**
- Overseeing enterprise-wide data handling and reporting, managing a system that processes and structures **large-scale** operational data across the company.
- Developed and scaled a reporting infrastructure generating **200+ high-level reports**, enabling comprehensive insights for decision-making.
- Driving automation and system integration, unifying data collection, form handling, and reporting workflows across multiple applications.
- Enhancing operational efficiency through applications such as **Platts**, **Production Control**, **Shift Superintendent**, **Centralized Authentication**, and **Energy Management**, ensuring accurate data collection, seamless reporting, and enterprise-wide data accessibility.
- **Providing technical mentorship**, guiding developers on best practices, **system design**, and **scalable architecture**, while overseeing **task execution** and **pull requests.**

Egbal – Senior Developer & Technical Lead

📅 April 2024 – January 2025| **Management & Automation**
Led the architecture, development, and technical supervision of a high-level enterprise management platform, enabling seamless oversight of projects, developers, payments, customers, and HR operations. Ensured code quality, database optimization, and structured development workflows while also contributing directly to backend development.

🔹 **Key Leadership & Impact:**

- **Designed and led the architecture** of a fully integrated **management system**, centralizing task tracking, sprints, goals, deadlines, and developer time management.
- **Supervised and guided developers**, overseeing **code quality**, **pull requests**
- Developed and optimized **database structures**, ensuring efficient automation, data tracking, and operational scalability.
- Implemented automation tools, including **Google Sheets extensions**, to streamline workflow efficiency.
- Managed **AWS** deployments, ensuring scalability, security, and high availability of the platform.

MigmigWeb – Co-Founder & Technical Lead

📅 March 2024 – March 2025| **Management & Optimization**
As a co-owner and technical lead, developed an industry-first reservation-based website builder using Next.js, enabling users to instantly generate fully optimized websites with a single click. Engineered a high-performance, highly scalable architecture, drastically reducing resource consumption and deployment time. While the marketing company handled business and branding, I led the technical development, architecture, and optimizations of the platform.

🔹 **Key Contributions & Impact:**

- Developed a **groundbreaking website builder**, allowing users to create and deploy a complete reservation website in **under a <u>second</u>**.
- **Optimized system architecture**, enabling **20x** more websites to operate using the resources of a single Next.js instance through **advanced SSR techniques**.
- Built a fully customizable platform, equipping users with **CMS-driven controls** to **modify** content, colors, images, videos, and a **complex scheduling system** that also apply **under a <u>second</u>.**
- **Solely designed and developed the entire system, managing frontend, backend, infrastructure, and deployment optimizations end-to-end.**

Freelance Software Engineer & Consultant

📅 January 2018 - Present | **AI, Web , Blockchain, Games**
These Are Some of my +90 Projects :

- **TraderPro** – automated trading bot with custom strategies, risk management, and trade execution.
- **Trader Pro Signals** – trading assistant that provides automated trade alerts, market insights, and reports.
- **Short Builder AI –** AI-powered video automation tool that edits and uploads content to social media platforms.
- **Blind Date** – Telegram Mini App for customized matchmaking, chat systems, and dating interactions.
- **Brotherhood** – crypto-based game with NFT rewards, a live region-based trading system, and tycoon mechanics.
- **React-Telegram-MiniApp Package** – Built a custom package for easier development of Telegram Mini Apps.
- **Online Hokm Game** – Created a multiplayer online Hokm card game for **Noshirvani University**.
- **Zaminto** – Built a real-time online marketplace for land trading with live bidding and exchange features.
- **Fougerite Plugins** – Developed custom modding plugins to enhance Rust Legacy Online Game Server
- **Financial Investment Platform** – Engineered an automated investment system with crypto payment integration, CMS, and reward distribution.
